

TC Linux - ograniczanie pasma oraz indukowanie błędów w transmisji

programy wykorzystane do zrobienia pomiarów:

- <https://man7.org/linux/man-pages/man8/tc.8.html>
- <https://github.com/tum-lkn/tcgui>

Schemat Połączeniowy

Schemat wygenerowany za pomocą [mojego skryptu](#)

Nazwa maszyny	Karta sieciowa	Adres ip	brama	Switch wirtualny
ubuntu-tc	eth0	192.168.1.1/24	X	NET-A
	eth1	192.168.2.1/24	X	NET-B
ubuntu-tc-A	eth0	192.168.1.10/24	192.168.1.1/24	NET-A
ubuntu-tc-B	eth0	192.168.2.10/24	192.168.2.1/24	NET-B

Ustawienia na maszynie "Ubuntu-tc"

- włączenie forwardingu dla ipv4

```
echo "net.ipv4.ip_forward=1" | sudo tee -a /etc/sysctl.conf
```

- zrestartuj interfejsy sieciowe
- skopiowanie tc-gui na maszynę oraz uruchomienie

```
sudo apt install git
git clone https://github.com/tum-lkn/tcgui
cd tcgui
sudo python3 main.py --ip 127.0.0.1
```

- Otwieramy w przeglądarce firefox adres 127.0.0.1:5000

The screenshot shows the TCGUI interface with the title 'TCGUI - 4 Available Interfaces'. It lists four interfaces: eth0 (192.168.1.1), eth1 (192.168.2.1), eth2 (172.30.99.239), and lo (127.0.0.1). Below this, for 'eth0 (192.168.1.1)', there is a table with columns: Name, Current Value, New Value, Variance / Correlation, and New Value. The rows are:

Name	Current Value	New Value	Variance / Correlation	New Value
Rate	None	<input type="text"/> mbit		
Delay	None	<input type="text"/> ms	±None	<input type="text"/> ms
Loss	None	<input type="text"/> %	None	<input type="text"/> %
Duplicate	None	<input type="text"/> %		
Reorder	None	<input type="text"/> %	None	<input type="text"/> %
Corrupt	None	<input type="text"/> %		
Limit	None	<input type="text"/>		

At the bottom are two buttons: 'Apply eth0 (192.168.1.1) Rules' (blue) and 'Remove eth0 (192.168.1.1) Rules' (red).

Ustawienia na reszcie maszyn

```
sudo apt-get update
sudo apt-get install iperf3
```

Musimy je jeszcze zaadresować statycznie za pomocą GUI albo za pomocą netplan

Podstawowe testy opóźnień

Test bez dodanego opóźnienia

The image shows two terminal windows side-by-side. Both are running on an Ubuntu system with tc installed.

Terminal A (Left):

```
administrator@ubuntu-tc-A:~$ ip a
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
        valid_lft forever preferred_lft forever
    inette ::1/128 scope host
        valid_lft forever preferred_lft forever
2: eth0: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc mq state UP group default qlen 1000
    link/ether 00:0c:29:1e:01:39 brd ff:ff:ff:ff:ff:ff
    inet 192.168.1.10/24 brd 192.168.1.255 scope global noprefixroute eth0
        valid_lft forever preferred_lft forever
    inette fe80::f588:9497%eth0/64 scope link noprefixroute
        valid_lft forever preferred_lft forever
        valid_lft forever preferred_lft forever
administrator@ubuntu-tc-A:~$ ping -c 10 192.168.2.10
PING 192.168.2.10 (192.168.2.10) 56(84) bytes of data.
64 bytes from 192.168.2.10: icmp_seq=1 ttl=63 time=0.553 ms
